

Plantwise Pesticide Red List

It is Plantwise policy¹ that plant doctors should not recommend the use of chemicals that are banned or restricted by international agreements. The table below lists the pesticides identified as Classes Ia and Ib by the WHO Recommended Classification of Pesticides by Hazard, as well as pesticides banned or restricted by the Rotterdam Convention on the Prior Informed Consent Procedure for Certain Hazardous Chemicals and Pesticides in International Trade, the Stockholm Convention on Persistent Organic Pollutants, and the Montreal Protocol on Substances that Deplete the Ozone Layer.

Please note: This table is up-to-date as of February 2021. Under these agreements, procedures exist for restricting additional chemicals and, as a consequence, the list of restricted chemicals changes on a regular basis. Refer to the websites of the agreements (given below) for the most up-to-date lists of banned and restricted pesticides. Likewise, the websites provide additional information on the hazards associated with each chemical. For more information, you can also contact plantwise@cabi.org.
